437

Abstract (see Fig. 1a)

In order to make an operating device easier to operate and to make final positions more convenient, it includes

- a base body (8), that is at least partially surrounded by
 - a housing body (2),
 - whereby the housing body (2) includes a disk body (3),
 - that is held via a basic position magnet arrangement (6)
 - with respect to base body (8) and
 - that may be moved by at least one motion element (5) with respect to the base body (8).
